## 1. INTRODUCTION

Figure 1 shows an example of a figure with multiple subpanels. The default behaviour for showyourwork is to assume that all the subpanels within a figure environment are generated by the same script. In this case, by labeling the figure with \label{fig:koch}, we are telling showyourwork that the script figures/koch.py generates the two PDF files included in the figure environment.

**Figure 1.** A sample plot with two subpanels, both generated from the same figure script. These show two iterations of a Koch snowflake.
